

EDUCATION

- Academy of Cryptography Techniques
  - Bachelor of Technology - Software Engineering; GPA: 3.38/4
    - Graduated with Second Highest Honors (9.2/10) – Capstone Project
- Ho Chi Minh, Viet Nam  
August 2021 - August 2025

EXPERIENCE

- Software Development Intern
  - Full-stack Developer Intern
  - Web Application Development: Developed and maintained web applications using ASP.NET Core and Angular, contributing to 3 client projects with improved user experience and 25% faster load times.
  - API Integration: Successfully integrated third-party APIs including payment gateways and authentication services, handling error management and data validation.
  - Code Review & Collaboration: Participated in code reviews and Agile development processes, collaborating with senior developers and following industry best practices.
- TechCorp Solutions  
June 2024 - December 2024

PROJECTS

- Bookstore Management System - API & MAUI Client
  - Full-stack Developer
  - Scalable Cloud & E-commerce API: Architected and built a RESTful API in ASP.NET Core 8 with a complete e-commerce workflow, including inventory management, order processing, promotions, and a multi-role (Customer, Staff, Admin) JWT-based authorization system.
  - Cross-Platform Mobile Application: Developed a cross-platform mobile app using .NET MAUI and the MVVM pattern, providing a feature-rich experience for customers (browsing, cart, checkout) and a dedicated management panel for staff and admins.
  - Cloud Storage & Image Processing: Integrated Google Cloud Storage (GCS) for scalable image hosting. Implemented server-side logic to automatically resize uploaded images into multiple formats (thumbnail, medium), optimizing performance and bandwidth usage for the mobile client.
  - Tech stack: ASP.NET Core 8, .NET MAUI, Entity Framework Core, SQL Server, Google Cloud Storage, JWT Authentication, RESTful API, MVVM Pattern
- Personal Project  
February 2025 - July 2025
- GitHub: [API Repository](#) — [Mobile App Repository](#)

  - ChatApp - Real-time Chat Application with AI Assistant
  - Full-stack Developer
  - Full-stack Real-time Architecture: Developed a complete SPA featuring real-time messaging, user presence indicators, and lazy-loaded history using ASP.NET Core SignalR for the backend and an Angular 17+ client.
  - OAuth 2.0 & JWT Security: Engineered a secure authentication flow by integrating Google OAuth 2.0. The API validates external identities and issues its own stateless JWTs for authorizing subsequent requests, protected by a custom HttpInterceptor in Angular.
  - Third-Party API Integration: Successfully integrated the OpenAI API to provide an in-chat AI assistant, demonstrating the ability to handle asynchronous communication with external, token-based services.
  - Tech stack: ASP.NET Core SignalR, Angular 17+, TypeScript, Google OAuth 2.0, JWT, OpenAI API, SQL Server, Entity Framework Core
- Personal Project  
May 2025 - July 2025

TECHNICAL SKILLS

- Languages: C#, TypeScript, JavaScript, SQL (T-SQL), HTML5, SCSS/CSS3, PHP
- Primary Skills: ASP.NET Core, Entity Framework Core, Angular, SQL Server, REST APIs, JWT/OAuth
- Secondary Skills: .NET MAUI, SignalR, React (Basic), Docker, GCS, CI/CD Pipelines
- Tools: Visual Studio, VS Code, Git, Postman, Swagger, Azure Data Studio
- Software Architecture: Clean Architecture, SOLID Principles, Dependency Injection, Asynchronous Programming, Design Patterns

CERTIFICATIONS

- Google AI Essentials: Coursera Certificate - XM4SPDCWWTT5
- Google IT Support Professional Certificate: Coursera Specialization - GADKFCWMGZDC
